

# Covid Vaccines: Be Afraid, Be Very Afraid

The results of a torrent of scientific studies are truly alarming for those who knuckled under.

by Armando Simón

“The best way to keep a prisoner from escaping is to make sure he never knows he’s in prison.”

–Fyodor Dostoevsky

In spite of tremendous [pressure](#), a number of persons refused, and continue to refuse, to be injected with the covid “vaccine.” Some refused for religious reasons. Others, such as myself and many [health care professionals](#) refused because we knew that the “vaccine” had not been properly tested and/or knew of the thalidomide and the cisapride (Propulsid)

tragedies. A regular vaccine takes years to develop and, equally important, rigorous testing through Phase I, Phase II and Phase III trials. Likewise with the [boosters](#). And others, again like myself, dissent because they bristle whenever someone threatens and forces them to do something.

Now, a torrent of scientific studies has been published, and continue to be published, in scientific journals that confirm our intuition. The results are truly alarming for those who knuckled under. I will herewith cite some of these studies because various authorities continue to promote these toxic “vaccines”—including a highly unethical recommendation from the American [CDC](#) to vaccinate [children](#) aged six months through four years, the subgroup most immune to covid and who should, therefore, be automatically excluded from any covid “vaccine” (regardless, it appears that the agency utilized fraudulent data to [come](#) to this decision). In Ireland, not a single child died from covid, but the Irish were bullied into getting the deadly injection. Some authorities are not just recommending, but [demanding](#) that all persons submit to [these](#) toxic injections.

The other reason for doing so is so that those presently refusing to be injected with the toxic substance will be able to present verifiable *scientific evidence* to support their refusal, whether it be in educational, military, or employment settings. Essentially, people are being ordered to play Russian roulette. The prospect of an injunction issued by a court of law followed by future lawsuits can be an effective deterrent if armed with this information, so I urge—no, I beg—the reader to disseminate this information as widely as possible.

But, first, a clarification. The covid injections are NOT a vaccine, they are an experimental drug. A vaccine is the introduction of an inert form of bacteria or virus into the body for the immune system to naturally build up antibodies to that disease. The covid “vaccine” uses a different

experimental approach altogether, called [gene](#) therapy, using [mRNA](#).

Second, there are a number of incidentals which are nonetheless of importance and should be briefly mentioned before proceeding with the studies: a) Pfizer staff originally had no idea whether or not the “vaccine” would [stop](#) the spread of covid b) Pfizer is going to increase its [price](#) by 400% c) the [CDC](#) director admitted that the agency had deliberately [lied](#) to the [public](#) c) one pharmaceutical president pretended to [inject](#) himself with the “vaccine,” but it was actually saline d) hundreds of [CDC](#) employees have not taken the faux vaccine, while among [CDC](#) employees 70% of covid cases occurred *after* “vaccination.”

The Vaccine Adverse Event Reporting System (VAERS) was established in 1990 for the purpose of collecting data from physicians and hospitals regarding any malignant “adverse events” connected with any vaccine. During the covid period when hysteria, suppression of dissent, and insistence on absolute and unquestioning obedience were at their height, hospital administrators and [doctors](#) refused to report adverse events associated with the injections. Anything that contradicted the narrative was condemned as being “disinformation” and suppressed from general dissemination. There were nurses who witnessed traumatic results from the vaccine that should have been reported to [VAERS](#), but they were ignored or intimidated into silence, or were fired. Some resigned from the positions, infuriated at what they witnessed and the [censorship](#) that existed (recently, a [German](#) nurse was found to have given a saline solution instead of the toxic vaccine to 8600 patients, thereby having saved many lives).

It is important to spotlight that there were a number of nurses and physicians who voiced their alarm and refused to administer the harmful injections and they were silenced, insulted, demonized and retaliated against. The [Great](#) Barrington Declaration, a [simple](#) statement of

concern from physicians put out in October 2020, was attacked. The Great and Powerful Fauci likened it to [AIDS](#) denialism.

Likewise, against tremendous pressure, they stuck their necks out to save patients' lives, prescribing—often at no cost to the patient—lifesaving medications which were [cheap](#) and [effective](#), certainly more [effective](#) and cheaper and less [harmful](#) than the [official](#) ones. And were persecuted for doing so. These [medications](#) ([hydroxychloroquine](#) and [ivermectin](#)), too, [were](#) demonized with [ivermectin](#) being sneered as “a horse [dewormer](#).” The persecution of [doctors](#) and [nurses who](#) are ethical and [care](#) for their patients' welfare continues.

The following presentation may seem dry as dust, but such is the nature of scientific research. Even so, it is imperative to know of these studies *and to propagate them*. For [those](#) under the [gun](#) it is [also](#) important to be [armed](#) with facts when confronted [with](#) a repetitive demand to submit and to submit without question.

## Studies

Covid “vaccines” do not work.

In fact, they may even facilitate infection.

CDC Director Rochelle [Walensky](#), CNBC host Jim [Cramer](#), [AOC](#), and President [Biden](#) all got sick with covid rafter receiving 1, 2, 3 and 4 “vaccines” and jabs.

In [July 2021](#), an outbreak of [covid](#) was detected in a Massachusetts community. 74% of [those](#) infected had been “vaccinated.”

Different studies, one carried out in [Britain](#) and the [other](#) one in Vietnam, have shown that the “vaccines” do not [work](#) in preventing transmission.

An [Israeli](#) study demonstrated that the injection was

ineffective in preventing the contagion of the Omicron variant of the [virus](#).

[70%](#) of covid cases among the employees of Centers for Disease Control and Prevention (CDC) in August 2021 were vaccinated.

[98%](#) of persons in an outbreak of covid in Norway were vaccinated.

It appears that hospitalization due to being infected with [covid](#) of persons who did not receive the “vaccine” was uncommon as opposed to those individuals who had been “vaccinated.”

In the UK, during [July 2021](#), over 47% of new covid cases were from persons who had submitted to the injection.

The rate of [hospitalizations](#) because of covid in fully vaccinated people rose by more than 1,000 percent between Dec. 11, 2021, and Jan. 8, 2022.

Although this is not a study, it is worth noting that a [funeral](#) director in Britain stated that deaths had skyrocketed after the “vaccinations” were undertaken. Elsewhere, many died within two [weeks](#) of being injected with the toxic substances and embalmers have been finding odd things in the cadavers’ blood system.

Adverse effects including mortality.

A study from Seattle, Washington, found heart abnormalities in adolescents and young men after the second dose of the injection. The [study](#) has [been](#) replicated several [times](#), while another study showed myopericarditis [being](#) present.

In a [Danish](#) study, “vaccination” with mRNA-1273 was associated with a significantly increased risk of myocarditis or myopericarditis, primarily among individuals aged 12-39 years, though in absolute terms the numbers were not high. In other words, as with many other reactions to other medications,

vaccines and allergies, not everyone is affected.

A joint study by the CDC and the FDA has found that the risk of myocarditis in young men increased by [13,200%](#) following a second dose of the injection. Indeed, [young athletes are dropping like flies](#).

A study in [Georgia](#) found an increase probability of myocarditis across all ages and sexes, but particularly in young men and male children. The [same](#) has been found to be true in Scandinavia and [New Zealand](#), which has resulted in mortalities. In [Israel](#), increased cardiovascular emergencies occurred after the injection rollout. In [Australia](#), myocarditis and pericarditis in all ages and genders, sometimes fatally, have at times followed injection of the toxic substances.

[Other](#) studies continue to [come](#) out that demonstrate an increase in myocarditis cases following the injection of the toxic substance.

Summarizing the findings of several [studies](#) as well as of autopsies, the authors of a study concluded that the toxic injection induces autoimmune-like inflammation which causes serious organ damage, especially in vessels, sometimes with deadly outcome.

It would be a mistake to think myocarditis is the sole adverse reaction to the “vaccine.” Centers for Disease Control’s VAERS discovered a [10,661.4%](#) increase in cancer. There has also been a [link](#) between the injection and [Bell’s](#) palsy, Guillain-Barré Syndrome, and [syncope](#). However, the CDC has not issued an alarm on this or any other adverse effects.

As a result of blood clots found in individuals after they submitted to the “vaccine,” the [FDA](#) is limiting—not abolishing—use of Johnson & Johnson’s COVID-19 “vaccine.”

Two whistleblowers have [warned](#) against pregnant

women [being](#) injected, while an [obstetrician](#) declared “What I’ve seen in the last two years is unprecedented.” A [New Zealand](#) doctor who warned pregnant women not to get the vaccine was turned in to the authorities by his own patients. A [Pfizer](#) document which was kept hidden revealed that 82% of pregnant women who were injected with the toxic solution had miscarriages. However, the 82% has [been](#) disputed, while the rebuttal has, in turn [been](#) rebutted. On the other side of the equation, the Pfizer “vaccine” has been found to lower [sperm](#) count in men.

If that was not enough, it appears that receiving the injection increases risk of suffering a stroke by 11,361% according to [VAERS](#) data.

A study published in *Lancet* found that Multisystem Inflammatory Syndrome in children ([MIS-C](#)) occurred in rare cases two to six weeks after receiving the injection.

How bad is it, really? Dr. [Meryl Nass](#), who has been doing research for three decades found that vaccine-related deaths in the past 20 months exceed the vaccine-related deaths of the previous 30 years. For this reason, she too, has been persecuted.

Although not a [formal](#) study, what I find particularly curious is that some physicians have noted that dormant viruses in their patients (e.g., Epstein-Barr, herpes simplex, herpes zoster, CMV) have become reactivated following the toxic injections.

What has occurred is nothing short of criminal. If the reader thinks I am resorting to hyperbole, I suggest he/she listen to Dr. Masanori [Fukushima's](#) scathing condemnation of this fiasco, all the more powerful coming from a people famous for being placid.

Some closing thoughts

I could easily quintuple the number of studies, but editors are finicky about word limit and, besides, I would be guilty of Oscar Wilde's dictum, "Like all people who try to exhaust a subject, he exhausted his listeners."

Whereas benevolent and wise journalists and [politicians](#) and celebrities spared no venom at pointing the finger at heretics voicing [dissent](#), there has been singular silence when it comes to studies and the number of people dropping dead from the "vaccine." They are the people who were screaming, "Trust the science!" The media in particular engaged in its [tactic](#) of suppressing news and events that contradicted the politically correct ideology.

To get a glimpse of the mentality of these individuals note that in [British](#) Columbia and in [California](#) laws have recently passed that punish doctors who voice "disinformation."

What is worse is that even at this late stage, with all the studies that have [come](#) out and become publicly available, the Covidian fanatics are still insisting on face [masks](#) and vaccines being mandatory. This is particularly the [case](#) in the [military](#) and in [several universities](#), affecting [young](#) adults, precisely the most vulnerable to fatal adverse events. The Covidians know this. They just don't care. For them, it was never about the health of people. It was about control. First, it was the face masks and [lockdowns](#) that were the symbols of conformity, of obedience, of submission, of accepting the narrative without question. Then, it was the vaccine.

In 2003, a few thousand people died from SARS. In 2004, a few thousand people died from bird flu. In 2009, a few thousand people died from H1N1. In 2016, a few thousand people died from zika virus. And every year prior to covid we used to have a pandemic; it was called the flu; thousands died. The very same thing was going to happen with covid; it was [obvious](#) from the beginning. Who knows how many people will ultimately die

from these “vaccines.”

I [would](#) like to end simply with [three](#) links which the reader should [check](#) out.
