

RFK, Jr. and The Real Anthony Fauci

Lloyd Billingsly writes in [Frontpage magazine](#).

Robert F. Kennedy Jr., son of former Attorney General Robert F. Kennedy and nephew of President John F. Kennedy, has filed paperwork to [run for president](#) in 2024. Even with the Kennedy brand, RFK Jr. may find the going tough.

Practically alone among Democrats, Kennedy stood up to White Coat Supremacy (WCS), rule over the people by medical bureaucrats. In practice, that meant standing up to the most powerful white coat supremacist, Dr. Anthony Fauci. In government for more than 50 years, Fauci came billed as "[America's Doctor](#)," a brilliant scientist, a selfless public servant, and so forth. Kennedy saw through the lies and wrote [The Real Anthony Fauci](#), a best-seller, ignored by politicians and the establishment media.

Anthony Fauci earned a medical degree in 1966 but in 1968 he

took a cushy "[yellow beret](#)" job with the National Institutes of Health. Fauci's bio showed no advanced degrees in molecular biology or biochemistry, yet in 1984 he became director of the National Institute of Allergy and Infectious Diseases (NIAID).

Nobel laureate Kary Mullis, inventor of the polymerase chain reaction (PCR) said Fauci "doesn't understand electron microscopy and he [doesn't understand medicine](#). He should not be in a position like he's in." But he was, with deadly consequences.

Kennedy details Fauci's secretive drug trials on black foster children in New York City. If the children refused the drugs, Kennedy explained, "they're held down and force fed. If the children continue to resist, they're taken to Columbia Presbyterian hospital, where a surgeon puts a plastic tube through their abdominal wall into their stomachs." This was all part of Fauci's "AIDS research," the foundation of the government-pharma empire the NIAID boss would create.

Fauci's favored remedy for AIDS was AZT (azidothymidine), marketed as Zidovudine, a DNA chain terminator rejected for cancer treatment because of excessive [cytotoxicity](#). There was no evidence that AZT could prevent or cure AIDS but as RFK Jr. explains, "Fauci exposed kids to deadly risks and agonizing discomforts in a speculative drug and vaccine exercise that offered absolutely no benefit for them."

Kennedy found that 80 of the 532 children who participated in Fauci's "clinical trials" died and 25 died while enrolled in a medication trial. By 2003, Fauci's NIAID was running more than 10,000 clinical trials involving children in 90 countries. The real Anthony Fauci, is "a sociopath who has pushed science into the realm of sadism." If that seems a stretch, consider another source Kennedy says is "vital" to understand what is now going on.

[*The Real AIDS Epidemic: How the Tragic HIV Mistake Threatens*](#)

[Us All](#), first released in 2007, is out in a new edition. Mathematical biologist Rebecca V. Culshaw PhD compares Fauci's AIDS debacle with his handling of the COVID pandemic.

Fauci's empire was based on the hypothesis that HIV causes AIDS. This was not accepted by the Group for the Scientific Reappraisal of the HIV/AIDS Hypothesis. Members included some of the nation's leading molecular biologists, such as cancer researcher Peter Duesberg, author of [Inventing the AIDS Virus](#), Kary Mullis, and Charles A. Thomas, former professor of biological chemistry at Harvard. The newfound AIDS establishment declined to debate these scientists, all vastly more qualified than Fauci.

The NIAID boss claimed that HIV can "infiltrate and kill" T-cells and "stimulate the response of other immune cells so that they eventually collapse from "overwork or confusion." This caught the attention of Thomas, who told reporters, "[No other virus](#) is credited with such a dazzling repertoire of destructive skills." HIV was "a simple retrovirus with a very simple genetic organization."

In similar style, Peter Duesberg wondered, "[What kind of virus](#), one day, out of nowhere, springs into action to destroy a person's immune system with no provocation?" Never had a retrovirus been shown to cause a human disease, or even a disease in animals.

Nobel laureate [Walter Gilbert](#) found "no animal model for AIDS," and [Dr. Harvey Bialy](#), scientific editor of *Biotechnology*, could locate "no pathogenic relative" for the virus. In other words, Dr. Fauci had no clue what he was talking about, a charge he often levels at critics.

"The nails in the coffin of the HIV/AIDS paradigm have been hammered long ago by a long list of scientists and medical researchers," Culshaw explains. "The AIDS orthodoxy's only counter to the points made and the questions raised consisted

of ad hominem attacks including the word 'denialist,' as well as stating that the dissenting views have been 'discredited,' without any reference as to *where* those views have been discredited."

Culshaw refutes the HIV/AIDS hypothesis in convincing fashion. Also helpful is her list of failed predictions, including "HIV will spread rapidly through the population." It didn't and it wasn't even close. During the 1980s people were also told that "by 1990 one in five heterosexuals will be dead from AIDS." They weren't, but Fauci retained his powerful position, with no accountability.

NIAID claimed that it was "unethical" to deny toxic drugs to those testing positive for HIV. The source of this bizarre claim could stand more exposure than Culshaw and Kennedy provide.

In 1995 Christine Grady, a nurse with the National Institutes of Health (NIH) authored [The Search for an AIDS Vaccine](#): *Ethical Issues in the development and testing of a preventative AIDS vaccine*. As the back cover explains, "Grady explores the current wisdom governing research with *human subjects*" (emphasis added) and "clinical trials are already ongoing," with AZT and other dangerous drugs such as Didanosine and Nevirapine.

Grady touts the work of Dr. Anthony Fauci but does not reveal that she had been [married to the NIAID boss for ten years](#). Grady earned a PhD in philosophy and bioethics from Georgetown but she is not a medical doctor and like husband Tony, her bio shows no advanced degrees in biochemistry or molecular biology.

In 2012, the [NIH named Christine Grady](#) chief of the Department of Bioethics of the National Institutes of Health Clinical Center. Grady came billed as "a strong international voice in human subjects protections," which was odd considering her

approval of drug trials with children and pregnant women. The NIH failed to reveal that Grady was married to Fauci and said nothing about the huge conflict of interest that arrangement represented.

As NIAID boss, Dr. Fauci controlled both public health policy and government spending on medical research. That dangerous concentration of power would deploy in force during the COVID pandemic.

During the 1980s, Fauci fast-tracked the approval of AZT and “in rushing to approve mRNA vaccines for COVID, what was essentially a massive clinical trial was *conducted in real time on the entire population.*” (emphasis added)

AZT failed to prevent or cure AIDS, and the untested COVID vaccines failed to prevent infection or transmission. Fauci wanted children [as young as four](#) to get the jab.

In Massachusetts, Culshaw notes, all deaths of those testing positive for HIV are counted as AIDS deaths, “and this happens if the person died of liver failure, a heart attack, suicide, drowning, CMV infection, or car accident, or *anything else*, AIDS-related or not.” During the throes of the pandemic, deaths of those testing positive for COVID were counted as deaths *from* COVID.

The AIDS establishment, without any proof or argument, charged that Peter Duesberg, Robert Root-Bernstein, Kary Mullis, and others other scientists had been “discredited.” In similar fashion, the medical scientists of the [Great Barrington Declaration](#) challenged Fauci’s draconian lockdown policies.

Instead of debating the policies on scientific grounds, NIH boss Francis Collins deployed Dr. Fauci for a “[quick and devastating takedown](#)” of the scientists. Most if not all were far more qualified than the NIAID boss, a non-practicing MD who claims “[I represent science.](#)”

As Culshaw recalls, Dr. Mark Wainberg, director of the McGill University AIDS center “openly called for criminal prosecution of anyone who publicly questioned the HIV/AIDS hypothesis.”

Wainberg finds a counterpart in Dr. Peter Hotez, a recipient of [grants from NIAID](#) who sought to make [criticism of Dr. Anthony Fauci a crime](#).

During the pandemic, Fauci contended that the COVID virus [arose naturally](#) in the wild. Those who found evidence of a laboratory origin were smeared as “conspiracy theorists,” and one of them was [Nobel laureate Luc Montagnier](#), who discovered HIV.

Like Duesberg, Thomas, Mullis and many others, Montagnier found no evidence that HIV causes AIDS. On the other hand, Montagnier did find evidence that the COVID virus had been engineered in a lab. That brought on vilification, even after Montagnier’s death in February of 2022.

According to [TheScientist](#), the French virologist “opposed coronavirus vaccines” and “stirred controversy by promoting the theory that SARS-CoV-2 was created in a lab.” No word of why the virologist might have arrived at that conclusion. The [Associated Press reported](#) that Montagnier “spread false claims about the coronavirus” and “claimed that the coronavirus did not originate in nature and was manipulated.”

When CDC director Robert Redfield found evidence of a lab origin, he got [death threats](#). No word of an investigation by the FBI which like the Energy Department now finds evidence that the COVID virus [leaked from a Chinese lab](#). This comes after Dr. Fauci has retired, but the Faucists still dominate the system.

“The COVID crisis,” Culshaw writes, “has shown many people that the public health bureaucrats do not necessarily have our best interests at heart. These people are not benevolent scientists with no vested interest, hidden in their ivory

towers producing 'the science.' They are business people, beholden to the politically motivated granting agencies and to the pharmaceutical companies." And there's more to what the COVID crisis taught us.

"Supposedly benevolent health czars and politicians are not above weaponizing a narrative about a disease to divide people, turn families and friends against each other, and imply that human contact is dangerous and should be avoided if possible. One can only commune with similarly 'good rule followers.'"

"The HIV empire is too big to fail," Culshaw contends, "but fail it must." For the embattled American people and their elected representatives, the empire is too failed to be big. The structures of White Coat Supremacy must be cut down to size or eliminated.

No government official should control public health policy and spending on medical research. Government institutions should be free of nepotism in the style of NIAID boss Fauci and wife Christine. It is as though Joe Biden tasked wife Jill to head the investigation of Hunter Biden's laptop and his dealings with foreign regimes.

No health official should head a single agency for 38 years. The NIAID director should be a fully qualified molecular biologist, and limited to a single four-year term. All actions and grants of NIAID and all NIH bodies should be posted on the internet in real time and downloadable form.

All actions taken by Dr. Fauci and associates should be subject to the most thorough investigation possible under the law. Rebecca Culshaw and Robert F. Kennedy Jr. lay out the evidence.

Members of Congress, you have no excuse. If you fail, the Faucist empire is certain to strike back.
